

Thank you for your interest. The quality, reliability, consistency respect to the property of our customers are some of the elements that characterize the DIMMETAL and that is what we have established in the Greek market.

Entrusting your project in DIMMETAL ensures,

- \* Clean and clear quote for your project.
- \* Our commitment to private agreements with the final value - range - type of construction - technical specifications - type glass - delivery time, payment method.
- \* 2 year warranty and provide Service whenever you need. With the possible prospect of an extended warranty.
- \* Modern Burglar Energy and frames that meet the requirements of the Rules of the Energy Performance of Buildings (KENAK).
- \* Provide the necessary certificates for CE Marking.

DIMMETAL the Company is certified according to the Quality Management System to ISO 9001: 2015.

In the Quality Management System includes all the requirements of §7.3 of EN14351-1: 2006 + A1: 2010 Production (FPC) manufacturing aluminum frames Control System.

All materials used for construction are of superior quality. The coloring of aluminum profiles are certified according to QUALICOAT specification, and to all profiles has implemented special treatment so as to meet the SEASIDE CLASS specifications (provides better protection against corrosion).

#### EXCELLENT QUALITY CONSTRUCTION

- \* Using parts from non-oxidized metals for better protection against corrosion..
- \* When assembling the profile is applying sealer, sealing high quality material.
- \* The rubber seals (rubbers) used is from EPDM.
- \* Create drainage holes in the frames are the frames and leaves, so that we have secure removal of water.
- \* In windows we use polyamide pads and gaps between glass and profiles are filled with rubber seals (there is no mosque - aluminum contact).
- \* The casement becomes necessary support mosque with 4 polyamide pads. Done and the leaves of sliding. With the right avoid phenomena like hanging sheets.
- \* The sliding panels used, depending on their weight, suitable rollers with at least two wheels.
- \* The windows have double Paste tape.
- \* Always be appropriate sealing (foil / mullion and mullion / tapas) so as to ensure maximum water safety and minimum air permeability.
- \* The mechanisms used are from German companies, Italian and accompanied by the corresponding certifications and guarantees

#### EXCELLENT QUALITY APPLICATION

- \* For the installation of the frames using high galvanized and stainless steel screws.
- \* If placed false frame are galvanized.
- \* The joints between the frame and the wall met and sealed with high quality sealants.
- \* The thermal break frames between the construction and the wall or placed special insulating material so as to avoid thermal bridges.
- \* After completion of the project the installation crew that is trained properly, do show the mode of construction the customer. At the end of all removed from the location and refined to come to its original state.

Yours sincerely  
For DimMetal,  
Manetas Dimitris
